PoE Switch and AC Panel

Overview

WAVLINK 5-Port Gigabit PoE Switch with AC Controller WAVLINK 5-Port Gigabit PoE Switch with AC Controller – 4x LAN + 1 WAN 1000Mbps, Supports IEEE 802.3AF/.

Key Takeaways

A PoE switch AC panel is a pre-assembled network switch that delivers both power and data over Ethernet cables, powered by standard AC voltage, ideal for IP devices and building automation.

Overview

A Po

E switch AC panel combines a network switch with Power over Ethernet (PoE) capability and an AC power supply, allowing devices like IP cameras, touchscreens, gateways, and lighting controls to receive both data and power through a single Ethernet cable. This eliminates the need for separate power adapters at each device, simplifying installation and reducing cabling costs.

Key Features

Port Configuration: Panels typically come with 5 to 8 ports, with most ports supporting PoE. For example, the CEN-SWPOE-5AC provides 5 Gigabit ports, 4 of which deliver PoE up to 30 W per port. Nuvospec panels offer 8-port configurations with 120 W total capacity.

A

C Power Supply: These panels are powered by standard AC voltage (commonly 120V), making them compatible with typical building electrical systems.

Indoor/

Outdoor Ratings: Panels are available in NEMA 1 (indoor) or NEMA 3R (outdoor) enclosures, providing protection against environmental factors.

Plug-and-

Play or Managed Options: Some panels are unmanaged for simple deployment, while others offer managed features for network control and prioritization. Industrial Reliability: Certain models, like WAGO and Phoenix Contact switches, support extended temperature ranges (-40°C to +70°C) and are designed for industrial automation networks.

Applications

Building Automation: Powering IP lighting, sensors, and control devices from a centralized panel. Security Systems: Supplying PoE cameras and access control devices without separate power lines. Industrial Networks: Connecting multiple field devices in harsh environments with reliable data and power delivery.

A

V and Control Systems: Providing a single power source for Crestron touchscreens and gateways.

Advantages

Reduces cabling and installation complexity by combining power and data in one cable. Centralized AC-powered panel simplifies maintenance and monitoring. Flexible deployment with indoor/outdoor options and industrial-grade reliability.

Supports both PoE and non-PoE devices safely on the same panel. In summary, a PoE switch AC panel is a versatile solution for efficiently powering and networking multiple devices in commercial, industrial, or automation environments, offering centralized AC power, PoE delivery, and robust installation options.
